The parallel linkage allows the planter to float on the seed bed evenly, and depth can be controlled with ease using the hand crank.

### The Monosem Meter

Constructed of cast aluminum and brass, and a stainless steel seed disc for durability, low maintenance, and accurate seed spacing.

- A well-formed raised bed is firmed by the front and rear steel rollers. Adjustable raised rib rollers define the seed line while reducing debris accumulation on the points.
- The Version M planter will plant up to 16 lines at a time on a single bed with uniform depth and unmatched singulation. Many other custom row spacing and bed configurations are available.
- The planter can be ground or hydraulically driven to control inter-row seed spacing. Seed clean out is simplified with an integrated vacuum seed cleanout system.
