

# MONOSEM

Enhanced precision

# STACKER

The three section stack-fold design allows many planting widths and narrow transport. When stacked, over center wings position provides safe and easy transport. Wing flex adjustments can be made for planting on uneven terrain. All stacking toolbar folding hinges are precision line-bored to ensure smooth folding and necessary strength.

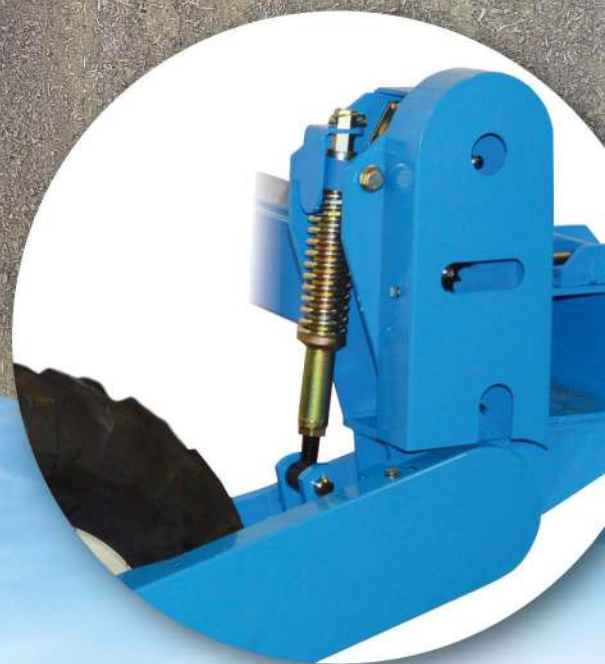

## Planter Specifications:

- Single, Twin-row, & custom configurations
- 20 to 45 feet working widths
- Row spacing as narrow as 15"
- Positive drive wheel block
- Cat 3 & 4 hitch options

The fully mounted option raises the bar in field performance. Through hitch redesign and component reconfiguration, the weight of the planter has been reduced and shifted forward, closer to the tractor. These improvements eliminate the need for lift assist, increasing productivity.

## Options:

- 1/2, 2, 3 bushel hoppers or 50 bushel CSS
- Lift assist to help balance the planter load
- Unit lift for stacking narrow row configurations
- SeedStar™ 2 ready kits
