

MONOSEM

Precision Vacuum Planters

7x7 NARROW LINKAGE

Monosem has redesigned the 7x7 linkage to accommodate multiple down pressure systems. Upgraded 1" bushings and 1/2 inch steel plate the narrow linkage can support everything from conventional to no-till conditions. This linkage will fit single row spacing as narrow as 9.5 inches as well as twin-row platform.

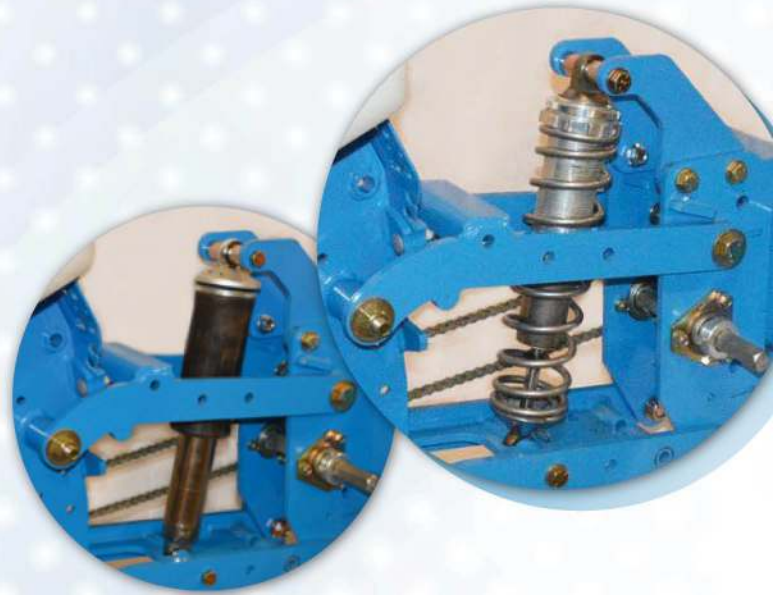

Springs

For conventional and lighter conditions, Monosem has an array of spring systems. Starting with our quick adjust up pressure system to our quick adjust down pressure system. A wide range of adjustment can be achieved with a simple turn of the wrench.

Monoshox[®]/MonoshoxAir[™]

The unique design and valving of the Monoshox[®] provided optimal depth control. A gas filled shock provides a smoother ride by independently reacting to varying field conditions. A coil over spring allows additional down pressure as needed by adjusting at the row. An upgrade to MonoshoxAir[™] allows for in cab adjustment.

Lockup

Optional Lockup kit works with all down pressure systems.

Hydraulic

Accepts most third party hydraulic down force systems.
