

# MONOSEM

Enhanced precision

Engineered for durability

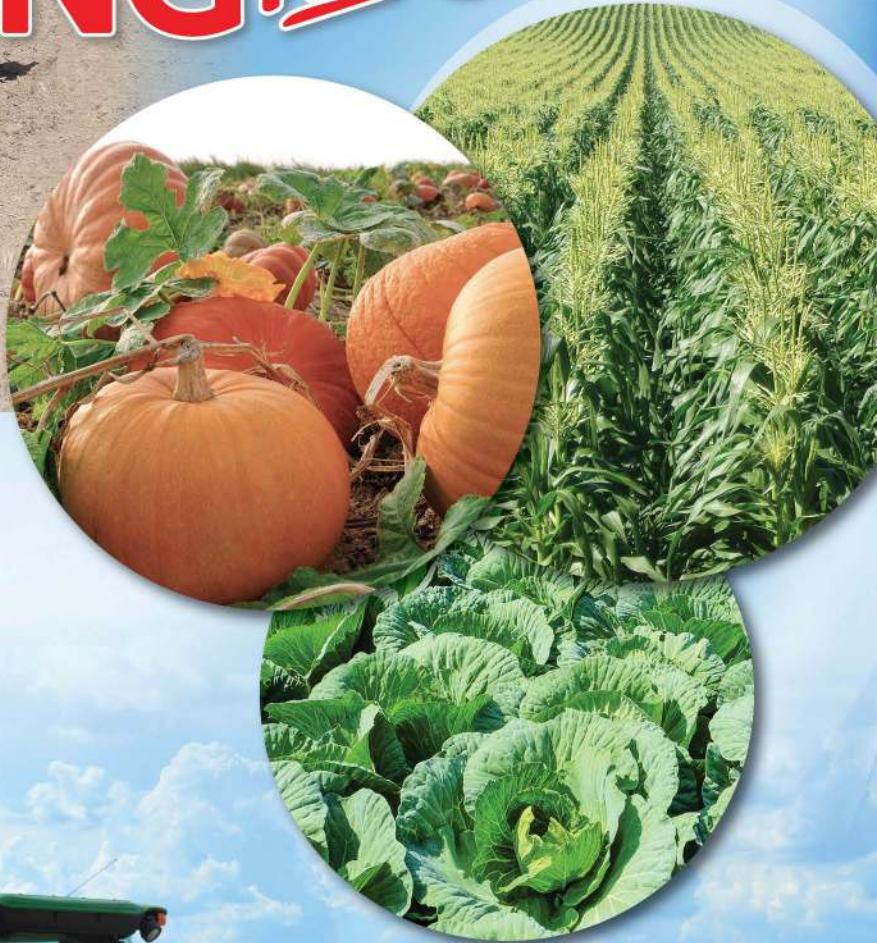

Monosems modular design allows for a wide range of row configurations and options such as dry and liquid fertilizer, insecticide systems, row unit mounted no-till and minimum till attachments.

2-Row Mounted

## NG plus 4

Single row conventional and No-till planters for specialty row crops.

4-Row Pull-Type

3-Row Mounted

# NG Plus Metering Unit

MONOSEM produces an accurate, simple, and extremely reliable meter

- 1. Meter Cover
- 1a. Control Window
- 1b. Clean-Out
- 1c. Seed Ejector
- 2. Singulator
- 3. Seed Disc
- 4. Agitator
- 5. Teflon Wear Gasket
- 6. Hold Down Plate
- 7. Meter Cover / Drive Side with Adjustment Lever & Vacuum

## Singulator

The brass singulator eliminates doubles. A spring on the cover maintains positive contact against the disc for optimal singulation, even with small seeds. Wear indicator marks show when time for replacement.

## Seed Discs

The 1.5 mm thick flat stainless steel discs with mounted brass agitators make a rigid durable meter. Changing is quick and done without tools. A complete range of discs is available for all precision seeding applications.

**Durability & Precision:** Critical Components made of cast aluminum, stainless steel, and brass - no plastic here! These materials help eliminate static electricity, and the need for graphite and talc. Runs consistently with a long service life.
